- Regulatory news
- Technology upgrades (e.g., forks, protocol improvements)
- Market sentiment
- Macro-economic factors

Technical Analysis

Uses historical price data to forecast future movements. Common tools include:

- Moving Averages

- RSI (Relative Strength Index)
- MACD (Moving Average Convergence Divergence)
- Support and Resistance levels
- Candlestick patterns

Beginners should start with simple indicators and gradually expand their toolkit.

Trading Strategies for Beginners

While there is no one-size-fits-all approach, the following strategies are accessible for newcomers:

1. Buy and Hold (HODL)

Purchase cryptocurrencies and hold them for the long term, ignoring short-term volatility. Suitable for those who believe in the asset's long-term potential.

2. Dollar-Cost Averaging (DCA)

Invest a fixed amount at regular intervals, reducing the impact of volatility and avoiding timing the market.

3. Swing Trading

Capture short to medium-term price movements by holding assets from days to weeks.

4. Day Trading

Make multiple trades within a single day to profit from small price fluctuations. This requires significant time, skill, and discipline.

5. Arbitrage

Exploit price discrepancies of the same asset across different exchanges.
