Understanding Elimination Systems in Algebra 2

What Are Elimination Systems?

Elimination systems, also known as the addition method, are techniques used to solve systems of linear equations by eliminating one variable to find the value of the other. This method involves adding or subtracting the equations to cancel out one variable, simplifying the process of solving for the remaining variable.

Example:

Solve the system:

$$\begin{cases} 2x + 3y = 7 \\ 4x - 3y = 5 \end{cases}$$

Adding the two equations:

$$\setminus$$

$$(2x + 3y) + (4x - 3y) = 7 + 5 \rightarrow 6x = 12 \rightarrow x = 2$$

$$\setminus$$

Substitute $(x = 2)$ into one of the original equations:

$$\setminus$$

$$2(2) + 3y = 7 \rightarrow 4 + 3y = 7 \rightarrow 3y = 3 \rightarrow y = 1$$

$$\setminus$$

Solution: $((x, y) = (2, 1))$
