QuestionAnswer What is the first step when you arrive at the scene of an emergency? Ensure the scene is safe for both the rescuer and the victim before providing aid. How should you check if a person is responsive? Gently shake their shoulder and ask loudly, 'Are you okay?' to see if they respond. What is the correct way to perform CPR on an adult? Call 911, then place your hands on the center of the chest and compress at a depth of about 2 inches, at a rate of 100-120 compressions per minute. When should you use an automated external defibrillator (AED)? As soon as possible on a person who is unresponsive and not breathing normally, regardless of whether they are conscious or unconscious. What are the signs of severe bleeding? Rapid bleeding that may spurt from a wound, blood pooling, or blood soaking through clothing or bandages. How do you treat a burn injury? Cool the burn with running water for at least 10 minutes, cover with a sterile non-stick dressing, and seek medical attention if necessary. What should you do if someone is choking and cannot breathe? Perform the Heimlich maneuver (abdominal thrusts) to help expel the object blocking their airway. How can you assist a person experiencing a stroke? Call emergency services immediately, keep the person comfortable, and note the time symptoms first appeared. What is the purpose of the recovery position? To keep the airway open and prevent choking if a person is unconscious but breathing normally. When should you seek professional medical help after providing first aid? Always seek medical help if the injury is severe, if symptoms worsen, or if you're unsure about the necessary care.
