Key techniques include:

- Maintaining eye contact
- Nodding and verbal affirmations

Kinn's Response:

"Feeling fatigued and achy can be caused by various factors, such as infections, stress, or nutritional deficiencies. It's important to consider other symptoms and your medical history. I recommend scheduling an appointment with your healthcare provider for a thorough evaluation. In the meantime, rest, stay hydrated, and try to note any additional symptoms you may experience."

2. Medication Instructions and Side Effects

Patient Question: "How should I take my new medication, and are there any side effects I should watch out for?"

Kinn's Response:

"Your medication should be taken exactly as prescribed, usually with or without food depending on the medication. Common side effects may include nausea or dizziness, but not everyone experiences them. If you notice severe side effects such as difficulty breathing, rash, or swelling, contact your healthcare provider immediately. Always read the patient information leaflet that comes with your medication, and if you have any questions, consult your pharmacist or doctor."

3. Preparing for Tests or Procedures

Patient Question: "What should I do to prepare for my upcoming blood test?"
