The Foundations of Linear Models

What Are Linear Models?

At their core, linear models describe a relationship between a dependent variable (response) and one or more independent variables (predictors) through a linear equation:

$$y = \beta_0 + \beta_1 x_1 + \beta_2 x_2 + \dots + \beta_p x_p + \epsilon$$

where:

- y is the response variable.
- $x_1, x_2, \dots, x_p$ are predictor variables.

- β_0 is the intercept.
- $\beta_1, \beta_2, \dots, \beta_p$ are coefficients representing the effect size of each predictor.
- ϵ is the error term, capturing noise and unmodeled variation.
