Students are guided through converting fractions to decimals, recognizing patterns, and classifying numbers based on their decimal representations.

Key Highlights:

- Recognition that terminating decimals correspond to rational numbers.
- Recognition that non-terminating, repeating decimals also correspond to rational numbers.
- Explanation that non-terminating, non-repeating decimals are irrational.

The solutions include numerous examples, exercises, and explanations to reinforce understanding.

3. Prime Factorization and the Fundamental Theorem of Arithmetic

This section explains how every composite number can be expressed uniquely as a product of primes, a concept crucial for understanding the properties of rational and irrational numbers.
