Understanding Therapeutic Stretching

What Is Therapeutic Stretching?

Therapeutic stretching is a specialized form of stretching designed to improve joint range of motion, alleviate muscular tension, and promote healing after injury or surgery. It often involves controlled, precise movements performed under guidance or with the aid of therapeutic tools.

Types of Therapeutic Stretching

There are several types of therapeutic stretching, each suited for different conditions and goals:

- **Static Stretching:** Holding a stretch position for a prolonged period to elongate muscles and improve flexibility.
- **Dynamic Stretching:** Moving parts of your body through full ranges of motion in controlled, smooth motions.
- **Proprioceptive Neuromuscular Facilitation (PNF):** Combining stretching with muscle contractions to enhance flexibility.
- **Myofascial Release:** Using gentle pressure to release tension in fascia, the connective tissue surrounding muscles.

Who Can Benefit from Therapeutic Stretching?

Therapeutic stretching benefits a wide array of individuals, including:

- Patients recovering from injury or surgery
- Individuals with chronic pain conditions such as fibromyalgia or lower back pain
