The "Section 1 Review Mendel's Legacy Answer Key" serves as an essential tool for students to verify their comprehension of these concepts and prepare for assessments.

Key Concepts Covered in the Answer Key

Understanding the core ideas in Mendel's legacy involves grasping several interconnected concepts. The answer key provides detailed explanations to reinforce these ideas.

1. Mendel's Experiments with Pea Plants

- **Selection of Traits:** Mendel chose specific traits such as seed shape, seed color, flower color, pod shape, and pod color, which had clear dominant and recessive forms.
- **Controlled Cross-Pollination:** Mendel manually transferred pollen to ensure precise breeding patterns.
- **Self-Pollination and Cross-Pollination:** He observed the differences between self-fertilization and cross-fertilization to analyze inheritance patterns.

2. Mendel's Laws of Inheritance

- **Law of Segregation:** Each organism carries two alleles for a trait, which segregate during gamete formation, ensuring offspring inherit one allele from each parent.
- **Law of Independent Assortment:** Genes for different traits are inherited independently of one another, leading to genetic variation.

3. Dominant and Recessive Traits

- **Dominant Traits:** Traits that mask the expression of recessive alleles in heterozygous individuals.
- **Recessive Traits:** Traits that are masked when a dominant allele is present but expressed in homozygous recessive individuals.

4. Punnett Squares and Probability

- **Predicting Offspring Genotypes:** Using Punnett squares to determine the likelihood of specific genetic combinations.

Sample Questions and Answers from the Mendel's Legacy Review

To illustrate the effectiveness of the answer key, here are sample questions often found in the review materials, along with summarized explanations.

Question 1: What is the significance of Mendel's experiments with pea plants?

Answer: Mendel's experiments demonstrated that traits are inherited in specific patterns, leading to the formulation of fundamental genetic laws. His work proved that traits are inherited through discrete units (genes), which was a groundbreaking discovery in biology.

Question 2: Define the law of segregation.

Answer: The law of segregation states that during gamete formation, the two alleles for a trait separate so that each gamete carries only one allele for each gene. This explains how offspring inherit one allele from each parent.

Question 3: How do dominant and recessive alleles differ?

Answer: A dominant allele masks the presence of a recessive allele in heterozygous individuals, meaning only one dominant allele is necessary for the dominant trait to be expressed. Recessive alleles are only expressed when an individual inherits two copies (homozygous recessive).
