Understanding Work Overload in the Apparel Industry

Defining Work Overload

Work overload occurs when employees are required to handle more work than they can reasonably complete within their allotted time, often leading to stress, fatigue, and decreased performance. In the apparel industry, this overload can manifest in various forms, including excessive production targets, tight deadlines, inadequate staffing, or complex task requirements.

Why is Work Overload a Concern in Apparel?

The apparel industry is characterized by several unique pressures:

- Rapidly changing fashion trends necessitate quick turnaround times.
- High-volume production demands to meet market needs.
- Cost-cutting measures that often lead to understaffing.
- Pressure to maintain quality while increasing output.

These factors contribute to a higher likelihood of work overload, which can compromise worker health, product quality, and overall operational efficiency.
