 - A comparator or voltage sensor detects whether the voltage exceeds a preset threshold.
- Control Logic:
 - When mains is present, the comparator outputs a HIGH signal, energizing the relay coil.
 - When mains fails, the comparator outputs LOW, de-energizing the relay.
- Switching Mechanism:
 - The relay contacts are wired to switch the load between mains and backup power.
 - When energized, load is connected to mains; when de-energized, load switches to backup.
- Indicators and Alarms:
