Question What is the purpose of using a spectrometer in physics experiments? A spectrometer is used to measure the wavelength or frequency of light, analyze spectral lines, and study the properties of light sources with high precision. **Answer** How do you determine the Young's modulus from an experimental setup? Young's modulus is determined by measuring the extension of a wire under different applied loads and using the formula $E = (\text{stress})/(\text{strain})$, where stress is force per unit area and strain is relative elongation. What is the significance of the Hall effect experiment? The Hall effect experiment helps in understanding the nature of charge carriers in a material (electrons or holes), and allows calculation of carrier concentration and mobility. How is the wavelength of sodium light measured in the diffraction grating experiment? The wavelength is calculated using the diffraction grating formula: $\lambda = (d \times \sin \theta)/n$, where d is the distance between lines on the grating, θ is the diffraction angle, and n is the order of diffraction. Why is it important to calibrate the voltmeter and ammeter before experiments? Calibration ensures accurate measurements by correcting for instrument errors, thereby improving the reliability and precision of experimental results. Explain the principle of the potentiometer used in physics labs. The potentiometer works on the principle of null deflection, where a potential difference is compared with a known EMF to measure unknown voltages accurately without drawing current from the source. What are the common sources of error in the experiment to determine the specific resistance of a wire? Common errors include contact resistance at connections, temperature variations affecting resistance, inaccurate measurements of length and diameter, and parallax errors during readings. How do you verify the law of squares in the damping of a pendulum? By measuring the amplitude decay over successive oscillations, plotting the logarithm of amplitude versus time, and confirming that the decay follows an exponential pattern consistent with the law of squares.
