- Thermostat
 - Regulates coolant flow based on engine temperature.
 - Opens to allow coolant flow when the engine reaches operating temperature, closing to restrict

flow when the engine is cold.

- Cooling Fan(s)
 - Assist airflow through the radiator, especially when the vehicle is stationary or moving slowly.
 - Controlled by a temperature switch or relay.
- Coolant Hoses
 - Connect various components, facilitating coolant flow.
 - Typically made of reinforced rubber or silicone.
- Coolant Reservoir (Expansion Tank)
 - Stores excess coolant and accommodates coolant expansion due to heat.
 - Provides an accessible point for checking coolant levels.
- Temperature Sensors and Switches
 - Monitor coolant temperature and activate cooling fans or warning lights as needed.

How the Cooling System Operates in the Daewoo Cielo

The cooling process involves a continuous cycle:

- The water pump pulls coolant from the radiator and circulates it through the engine block and cylinder head via internal passages.
- As the coolant absorbs heat from the engine, its temperature rises.

- The thermostat senses this increase and opens when the engine reaches the predetermined temperature (usually around 85-90°C), allowing coolant to flow into the radiator.
- The radiator releases heat from the coolant into the air, aided by airflow and the cooling fan.
- The cooled coolant returns to the engine, maintaining a stable operating temperature.
- The cooling fan activates when the coolant temperature exceeds a certain threshold, ensuring effective heat dissipation even at low speeds.

Common Issues with the Daewoo Cielo Cooling System

Like any vehicle, the Daewoo Cielo cooling system can encounter various problems over time. Recognizing these early signs can prevent severe engine damage.
