Question 1: What is the primary purpose of using two-factor authentication (2FA)?

Options:

- a) To speed up login processes
- b) To provide an additional layer of security
- c) To reduce the need for passwords

d) To allow multiple users to access an account simultaneously

Expert Explanation:

The correct answer is b) To provide an additional layer of security.

Two-factor authentication enhances account security by requiring users to provide two different types of identification before access is granted?often something they know (password) and something they have (a mobile device or security token). This significantly reduces the risk of unauthorized access even if passwords are compromised.

Question 2: Which of the following best describes a phishing attack?

Options:

- a) A method of encrypting data to protect privacy
- b) An online scam where attackers impersonate trustworthy entities to steal sensitive information
- c) The process of securely deleting files from a computer

Phishing involves sending deceptive emails or messages that appear legitimate to trick individuals into revealing passwords, credit card numbers, or other confidential data. Recognizing phishing attempts is crucial for maintaining online security.

Question 3: Which of the following is a best practice when creating a password?

Options:

- a) Use your birthdate for easy recall
- b) Use a mix of uppercase, lowercase, numbers, and symbols

- c) Keep the same password for multiple accounts
- d) Use simple words or common phrases
