4. Metamorphism

- Process: Alteration of existing rocks by heat, pressure, and chemically active fluids.
- Reversibility: Generally irreversible without melting; metamorphic rocks can revert to other forms via melting or uplift and erosion.

5. Uplift and Exposure

- Tectonic forces uplift rocks, exposing them to surface conditions where weathering and erosion occur anew, closing the cycle.

The Cycle in Action: How Rocks Transform

The diagram demonstrates that the rock cycle is not linear but a network of pathways allowing rocks to transition between forms repeatedly. Some notable pathways include:
